The goal of this two-day seminar is to assist each attendee in formulating a preparation strategy for obtaining a passing grade in the FPE P.E. Exam. The seminar scope includes an overview of the P.E. exam process, a review of each of the five fire protection topics comprising the technical scope of the exam, and a discussion of resource materials such as handbooks, fire codes and standards. The second day of the course will be a sample test workshop, including determining the solution to a sample problem from each of the five subject areas.
